

# MacOS Catalina: Resolving Adobe AIR Error

If you have upgraded to the latest **MacOS Catalina**, you may have received this error after installing **Adobe AIR** or after opening **KOSMA**:

But don't worry - we've figured out a way to get around this. It's not the simplest process, but it does work.

## Step 1 of 3: Open Finder: Go to Frameworks

- Open **Finder**.
- From the Finder menu bar click **Go > Go to Folder**
- Type or copy/paste this: **/Library/Frameworks**
- Click **Go**

# MacOS Catalina: Resolving Adobe AIR Error

## Step 2 of 3: Open Frameworks in Terminal

- Right-click on the Frameworks folder
- click on "New Terminal at Folder"

This will open a new Terminal window. It should look something like this:

# MacOS Catalina: Resolving Adobe AIR Error

## Step 3 of 3: Remove Quarantine Bits

- a. Type or copy and paste:  
**sudo xattr -d com.apple.quarantine "Adobe AIR.framework"**  
and press "RETURN"
- b. Enter your Mac login Password when prompted and press "RETURN".

That's it!

If KOSMA is already installed open it. If not, install it from our website
